

ASX ANNOUNCEMENT

29 March 2021

**Emyria and Cann Group to partner on Schedule 3
medicine CBD product registration**

-
- Collaboration agreement aims to accelerate the Australian registration of a Schedule 3, over-the-counter, cannabidiol (CBD) medicine
 - Emyria's EMD-003 drug development program will incorporate Cann Group's newly acquired Gelpell™ microsphere formulation technology
 - The partnership provides potential significant cost and speed advantages to registration
 - Successful registration with the Australian Therapeutic Goods Administration (TGA) opens the path to registration opportunities overseas
 - Emyria and Cann Group will negotiate product commercialisation arrangements prior to a regulatory approval application being submitted
-

29 March 2021 - Emyria Limited (ASX: EMD) (Emyria) and Cann Group Limited (ASX: CAN) (Cann Group) are pleased to announce a collaboration agreement to seek accelerated registration of a unique, low-dose, CBD-only capsule with Australia's Therapeutic Goods Administration (TGA). Successful registration as a Schedule 3 medicine would result in an over-the-counter, pharmacist-only CBD medicine.

Under the agreement, Emyria's EMD-003 drug development program will use Cann Group's proprietary Gelpell microsphere technology, as the basis for seeking a Schedule 3 registration for treating unmet needs in mental health. A joint project committee will be formed to oversee the allocation of registration costs and the development of commercialisation agreements.

Cann Group recently acquired the rights to the Gelpell™ technology via the purchase of the Satipharm group of companies (as previously announced by Cann Group on 15 February 2021), which has commercialised a CBD product utilising the technology. Cann Group plans to incorporate manufacturing of the microsphere formulation in its new production facility currently under construction near Mildura.

The collaboration capitalises on a number of important milestones that have already been met:

- Phase 1 trials already completed for 10mg and 100mg doses of the Satipharm capsule
- Satipharm CBD has been shown to have 3.5 times greater bioavailability compared to oil preparations (at 100mg)¹
- Long-term stability testing undertaken (and continuing)
- Emyria already has real-world data on more than 170 patients taking the Satipharm CBD capsule
- Emyria has prepared protocols for pivotal clinical trials for the target indication.

Emyria's experienced drug development and clinical team will lead the registration program. Pivotal clinical trials are in advanced stages of planning and are being guided by insights from Emyria Data,

which includes robust safety, efficacy and patient preference data for more than 3,500 patients treated at Emyria's Emerald Clinics.

Emyria's Managing Director, Dr. Michael Winlo, said: *"This partnership greatly accelerates Emyria's EMD-003 drug development program by combining Emyria's unique clinical data and drug development expertise with Cann Group's best-in-class CBD delivery technology.*

"Satipharm CBD has already completed robust stability testing as well as Phase 1 clinical trials as required by the TGA. This allows us to move straight to pivotal clinical outcomes trials saving significant time and money. An experienced Contract Research Organisation (CRO) has already been engaged to manage these trials.

"Further, at Emyria, we already have deep insights into how the Satipharm product performs clinically, having written over 400 Satipharm prescriptions to more than 170 patients. This de-risks the pivotal clinical outcomes trials required as an important first step towards registration with the TGA."

Cann Group's CEO, Peter Crock, said: *"Cann Group is pleased to partner with Emyria to accelerate the registration of a Schedule 3 medicine.*

"We anticipate there will be a large patient demand for a TGA registered CBD medicine that is convenient to patients and demonstrates the highest standards of quality, safety and efficacy.

"We believe our microsphere technology - with improved bioavailability - fits well with Emyria's drug development programs, which have the potential to accelerate registration with the TGA due to Emyria's extensive real-world data, national clinical site network and previous drug development experience.

"We are also working to bring the Gelpell pharmaceutical GMP manufacturing line to Cann's Mildura production facility which, when commissioned at the end of this calendar year, will become the largest cannabinoid medicine production facility in Australia."

EMD-003 targeting a major unmet need

EMD-003 is targeting psychological distress and the symptoms of anxiety, depression and stress for certain patient populations.

Mental health is a rising global health challenge, particularly in the last 12 months. In the 2017-2018 National Health survey, mental health topped the list of chronic health conditions in Australia affecting 4.8 million people, or 20.1% of all Australians¹. In any one year over 2 million Australians suffer from anxiety alone.² Psychological distress, in particular, has been increasing in incidence.³

A recent internal analysis had revealed that more than 50% of Emerald Clinics' patients present with moderate to severe depression, anxiety and / or stress as measured by validated clinical assessments.

The collaboration, if successful, will deliver a new, registered medicine for the treatment of psychological distress and symptoms of depression, anxiety and stress.

Cann Group's proprietary Gelpell technology

Cann Group's microsphere formulation embeds CBD in seamless gelatine microspheres (tiny beads) which have a dimension of 2 mm or less and are packed in hard gastro-resistant capsules. The active ingredients – cannabinoids - are bound and protected by a three-dimensional natural gelatine matrix in each bead. These gelatine beads protect the CBD contained in them from heat, light and oxygen, exhibiting improved stability and bioavailability of cannabinoids compared to other formulations.

This announcement has been approved and authorised for release by the Board of Emyria Limited and the Board of Cann Group Limited.
