

ASX ANNOUNCEMENT

2 June 2022

First commercial crop harvest underway at Mildura facility

2 June 2022 – Cann Group Limited (ASX: CAN) (**Cann** or the **Company**) announced today that it is currently harvesting the first commercial medicinal cannabis crop at the Company's flagship Mildura facility.

A cultivation permit for the commercial crop was issued by the Office of Drug Control (**ODC**) in March 2022 and the harvest has proceeded on schedule following the transfer of cannabis plants from Cann's Southern facility. With this harvest underway, Cann is now actively cultivating commercial crops across all three of its licensed sites. Subsequent crops at Mildura are already progressing well through the vegetative and flowering stages, and cropping will continue on a cyclic basis.

Plants harvested from the current crop will be trimmed and dried on-site before undergoing extraction and manufacture of medicinal cannabis products in fulfilment of Cann's local and international commercial supply agreements.

Cann's CEO, Mr Peter Crock said "The first commercial harvest at our Mildura site is a significant achievement for the Company. This harvest is just the first of many to come, but it marks the next phase in Cann's activities as we begin to reap the benefits of our fixed infrastructure investments."

Above: the first tables of plants are moved into the processing room to be harvested.

Authorised for release by the Board of Directors of Cann Group Limited.
